

ABSTRACT

A hydraulic distributor for a washing machine which comprises a rotating axle (7), water being directed from  
5 the mains to a plurality of compartments of the washing machine by means of the rotation of said rotating axle (7); a hydraulic body (2) which comprises an emptying pipe (10), a draining pipe (11) and an exit pipe (15) for re-circulation; and a valve body (6) housed inside said  
10 hydraulic body (2). By means of the rotation of the rotating axle (7) the valve body (6) can have a first position, in which the flow from the emptying pipe (10) is directed to the draining pipe (11), and a second position, in which the flow from the emptying pipe (10)  
15 is directed to the exit pipe (15) for re-circulation.
